

When a Spill Occurs...

1. **Assess the Risk:** Determine the nature and substance of the spill.
2. **Select Personal Protection (PPE):** Select the proper clothing and gear to safely respond to the spill. If you cannot identify the spilled substance, always treat it as highly toxic.
3. **Contain the Spill:** Use socks, dikes, and/or booms to contain the spill and keep it from spreading or contaminating water sources.
4. **Stop Product Flow:** Act quickly to stop the source of spilled material, if possible. This minimizes the spill.
5. **Absorb Contained Fluids:** Place absorbent pads, pillows, socks, and/or booms directly on the spill.
6. **Dispose and Decontaminate:** Dispose of contaminated material in compliance with local state and federal regulations. Decontaminate the site, personnel, and all equipment.
7. **Complete Final Reports:** Complete all notification documents, medical exposure reports, and paperwork associated with the spill.
8. **Restock Materials:** Replace absorbent materials, salvage drums, and safety equipment that were used in the clean-up process.

Spill Kit Compatibility

Oil Only Spill Kit

Universal/General Purpose Spill Kit

Aggressive Liquids Spill Kit

Oil Only, Not Water

Oils, Water, Coolants, & Solvents

Acids, Bases & Unknown Liquids
