

Bazooka & Installation Kit
SKU# BAZOOKA-12KIT

Rainwater intrusion can be a costly nuisance when it comes to outdoor containment options. Avoid expensive vac trucks to clean out your berm or spill pallet when it fills with minimally contaminated rainwater. The Bazooka is both a trickle filter and automatic shut off valve using Drainiac technology to capture and contain oils & fuels while letting clean water pass through. The filter media swells as it absorbs hydrocarbons before shutting off to prevent environmental damage. This installation kit contains everything need to retrofit your containment berm with the BAZOOKA system.

- 56-gallon per hour flow rate
- Pre-filter prevents debris from entering drain
- Maintenance free
- Replacement filter cartridge available
- Allows water to pass from containment sump while capturing hydrocarbons

Technical Data	
Dimensions	15" L x 4" W x 4" H
Unit Weight	6 lbs
Flow Rate	56 gph
Absorption Capacity	18-24 oz.
Material	Petroguard Polymer
Regulations	EPA, SPCC, NPDES
Options & Accessories	
BAZOOKA Replacement Cartridge	BAZOOKA
